

**7Core** offers printed circuit board design services and manufacturing solutions. Our mission is to provide exceptional PCB design service to the electronics industry and become your first choice for quality, speed and affordability.

- **We have the experience** to design everything from the smallest design projects to the seemingly impossible design projects. Our broad range of board design experience gives us the ability to provide several design solutions quickly to the engineer so he can make a thoroughly informed decision concerning the direction that best meets the needs of the project.
- **Top notch communication & flexibility** to meet your PCB design needs with our clear communication while molding our team's schedule around yours.
- **Complimentary design milestone analysis report** to review projected PCB design phase completion dates which will assist you with product planning forecasts.
- **We use DownStream Technologies® CAM350®** as our design verification tool to provide assurance and peace of mind that your design has been thoroughly checked for fabrication.
- **Complete design service**, whether it is to fill a role as your lead designer or to become a seamless extension to your in-house design department. We can help increase your design band width during a bottle neck of work or provide night shift and/or weekend coverage in order to assist you in meeting your deadlines.
- **Around the clock design support**, offers you a solution to achieve those quick turn and time to market schedules.
- **Complete turnkey solution** using reliable manufacturing and assembly providers in the industry so that we can meet your design, fabrication and assembly needs.
